

## Address or Device SIP Trunking Service

VoIPiTalk's SIP Trunking Service allows you to connect SIP trunks to a SIP Enabled On-Premise PBX or Softswitch. Like a TDM service, just choose the number of channels/lines you need to handle the traffic volumes expect to prevent any busy signal conditions. Traffic can be two-way traffic and handle InBound Telephone and Toll Free calls along with Outbound Calls including Toll Free and International destinations. Even your customer does not have a SIP Enabled PBX an Analog to IP Gateway device can be used to connect traditional TDM switches to the network via SIP trunks.

For InBound calls the service allows you to purchase or port telephone numbers as a resold service from anywhere in the US that is on Toly's network and the service route calls to those numbers directly to your switch via these SIP trunks.

### Service Charges:

Chargeable Item	Description
"White Label" Setup Fee	One Time Charge per Sub-Account Setup
SIP Trunk	MRC charge and NRC one time charge per channel
Telephone Number Charges
